

# HOSTED MONITORING TO MAKE THE MOST OF STAFFING RESOURCES

Working together, Equum and AvaSure will provide an affordable, easily adoptable and complete virtual monitoring solution, giving you peace of mind.

Hospitals today are faced with the challenge of doing more with less. A recent study found that 30% of healthcare workers had quit or been laid off since the pandemic began, while 31% of the remaining workforce was thinking about finding another job. Prior to the pandemic, it was estimated that more than 1 million registered nurses would leave the workforce by 2030, most to retirement. With resourced care delivery at the bedside in jeopardy, adverse events are increasing, including patient falls. Nearly 1 million patient falls occur in healthcare settings, with a third being preventable, costing the U.S. healthcare system nearly \$34 billion annually, studies show. With an aging population, hospital operating expenses rising, nurse safety and patient experience are at risk without the integration of new models that extend access to resources such as telehealth.

AvaSure can now provide the end-to-end solution, in partnership with Equum Medical. Hosted monitoring is the service in which highly trained patient safety specialists, using the AvaSure TeleSitter® solution, keep 24/7 watch via video and intervene via audio or alarms to stop risky behavior.

**1 MILLION
