

GUARDIAN HARDWARE

AvaSure® delivers a comprehensive suite of solutions for all inpatient telehealth needs on a single platform, with proven scalability. From stand-alone facilities to large integrated health systems, AvaSure meets the needs of any organization, resulting in improved patient safety and better workforce efficiencies.

AvaSure creates a variety of hardware options designed to outfit any facility. All devices can be used with any of AvaSure's software solutions. It is also important to note that all devices:

- + Meet **HIPAA** and patient privacy requirements
- + Include a **privacy mode** which can be activated by monitoring staff during patient care
- + **Do not record** audio or video
- + Can be used on the hospital's secure **wireless** or **wired** ethernet network

AVASURE GUARDIAN™ HARDWARE

MOBILE

The Guardian mobile device is the most common among hospitals as it provides flexibility for your organization to easily wheel from room to room and is designed to be used in most clinical environments. The modernized device includes power, privacy and wireless indicators to assure reliability and efficient set up.

2-WAY MOBILE

The Guardian 2-way mobile device adds two-way video, designed for different types of providers to see and communicate with a patient from remote locations. The advanced 360° pan/tilt/zoom camera allows a provider to have full control of the patient view and allows them to get as clear an assessment as an in-person visit while simultaneously reviewing the patients' medical record. The purpose is to provide better care, promote efficiency and save costs.

CEILING

The permanent ceiling devices are used throughout facilities to provide virtual care and an extra layer of safety you cannot afford to be without. AvaSure offers a permanent ceiling device in two options: a 2x2 drop ceiling tile or dry wall device, which is commonly used for monitoring behavioral health patients providing a tamper-resistant device.

ACCESS

The AvaSure Guardian Access device is a compact, wall mounted devices that includes a HDMI connection to utilize the hospital television for 2-way video connection. The 16" wall device provides an easy access point to virtual care and is designed to expand coverage on patient safety and nurse capabilities.
